Effect of different ratios of coarse and fine limestone particles on production and shell quality of layers at peak production
Phirinyane, T.B., Van der Merwe, H.J., Hayes, J.P. and Moreki, J.C.

**ABSTRACT:** A study was conducted to determine the influence of different particle sizes of limestone in layer diets on egg production and egg quality. The effect of particle size on egg size distributions at a later stage of the laying period on egg production and egg quality needs further investigation.

**Keyword:** Calcium, Egg production, Egg weight, and Eggshell quality

Influence of some major genes on early lay traits of crossbred local Pullets in a Humid Tropical Environment
Effects of supplemented diets with garlic organic extract and streptomycin sulphate on intestinal microflora and nutrients digestibility in broilers

Influence of the nature of the energy source in the concentrate on the concentration and molar proportions of volatile fatty acids in rumen of sicilo-sarde sheep breed
